

Cyano Activate Curing Agent- Size 200ml Datasheet

Product Code: RC13105

General Descriptions

Cyano Activate is used for the fast curing of Cyanoacrylates, depositing a correct balance of neutralising ions on the surface, stimulating attraction for the adhesive and preparing the surface for bonding. It is primarily designed for the fast cure of thick deposits of adhesive or for post curing outside of the bond line. Tradelock Cyano Activate[®] prevents the absorption of the lower viscosity superglues into porous items and helps to bridge gaps which decrease polymerisation times.

Physical Data

Solvent base	Hepatane
Colour	Sightly off-white / Amber
Cure Speed	Very Fast, Usually < 10 seconds
viscosity	< 10 Cps
Specific gravity	0.87
operating temperature	-5°C up to +25°C
Shelf Life	12 month in unopened containers

Application

Ensure that all parts to be bonded are clean, dry and free from dust / grease or any other contaminants liable to impair adhesion. Tradelock Cyano Activate can be applied by brush or by spraying on to the surface to be bonded, allow the solvents to evaporate before bonding.

General Information

Storage

Products should be ideally stored in a cool, dry location in unopened containers at a temperature between 8° to 28°C unless otherwise labeled. Optimal storage is at the lower half of this temperature range.
